

## Extending Datasets to Support Time Intelligence

### Agenda

- Understanding Evaluation Contexts
- Creating a Time Dimension Table
- Understanding DAX Time Intelligence Support
- Working with DAX Time Intelligence Functions

## Evaluation Contexts

- DAX expressions evaluated using two context
  - Filter context
  - Row context
- Row Context
  - The set of active rows in a calculation
- Filter Context
  - The current row in a table iteration

## Understanding Filter Context

- Visuals apply various filters in evaluation contexts

### Filters on this evaluation

[Year] = 2015  
[Month in Year] = "October"  
[Sales Region] = "Western Region"  
[Customer Type] = "Repeat Customer"

## Understanding Row Context

- There are 2 cases that create active row context
  - Evaluation of a calculated column

```
=(TODAY()-[BirthDate])/365
```

```
=LEFT([ProductCategory], Find(" >", [ProductCategory]))
```

- Evaluation of a DAX function that iterates over a table

```
=SUMX(RELATEDTABLE(Sales), Sales[SalesAmount])
```

```
=SUMX(Sales, Sales[Quantity] * RELATED(Products[UnitCost]))
```

## Understanding Iterators Like SUMX

- Standard aggregation functions (e.g. SUM) have no row context
  - You can sum an individual column but you cannot sum an expressions

Formula Bar: Gross Margin = SUM( Sales[SalesAmount]-Sales[ProductCost] )  
 Error Message: The SUM function only accepts a column reference as an argument.

- Iterator functions (e.g. SUMX) iterate through rows in a target table
  - First argument accepts an expressions evaluates to a table of rows
  - Second argument accepts expression that evaluated for each row in table

Formula Bar: Gross Margin = SUMX(Sales, Sales[SalesAmount]-Sales[ProductCost] )

- Iterator functions can also be used in calculated columns

Productid	Product	UnitCost	ListPrice	Category	Subcategory	Product Sales Revenue
1	Batman Action Figure	\$6.85	\$14.95	Action Figures	Tough Guys	\$130,767.65
2	Captain America Action Figure	\$7.05	\$12.95	Action Figures	Tough Guys	\$499,714.6
3	GI Joe Action Figure	\$6.10	\$14.95	Action Figures	Tough Guys	\$168,905.1
4	Green Hulk Action Figure	\$2.85	\$9.95	Action Figures	Tough Guys	\$82,764.1
5	Red Hulk Alter Ego Action Figure	\$2.85	\$9.95	Action Figures	Tough Guys	\$13,691.2

## DAX Functions With Tables Parameter

- The following DAX functions create row context
  - AVERAGEX
  - COUNTAX
  - COUNTX
  - MAXX
  - MINX
  - SUMX

## DAX Functions that Return a Table

- ALL
- ALLEXCEPT
- CALCULATETABLE
- DISTINCT
- FILTER
- RELATEDTABLE
- VALUES

## Using the CALCULATE Function

- CALCULATE provides greatest amount of control
  - You'll see more about Calculate later in this module

```
Sales Revenue RT =  
CALCULATE(  
    SUM(Sales[SalesAmount]),  
    FILTER(  
        ALL('Calendar'),  
        'Calendar'[Date] <= MAX('Calendar'[Date])  
    )  
)
```

## Agenda

- ✓ Understanding Evaluation Contexts
- Creating a Time Dimension Table
  - Understanding DAX Time Intelligence Support
  - Working with DAX Time Intelligence Functions

## Creating Calendar Table as Calculated Table

- Use **New Table** command in ribbon

- Create calculate table using CALENDAR function in DAX

Calendar =	CALENDAR( DATE( 2012, 1, 1), DATE( 2015, 12, 31) )
Date	
	1/1/2012
	1/2/2012
	1/3/2012
	1/4/2012

Calendar =	CALENDAR( DATE( YEAR(MIN(Sales[PurchaseDate])) , 1, 1), DATE( YEAR(MAX(Sales[PurchaseDate])), 12, 31) )
Date	
	1/1/2012
	1/2/2012
	1/3/2012
	1/4/2012
	1/5/2012
	1/6/2012

## Adding Columns to Calendar Table

- Year

Year =	YEAR('Calendar'[Date])
Date	Year
	1/1/2012 2012
	1/2/2012 2012
	1/3/2012 2012

- Quarter

<div>X ✓</div>		Quarter = YEAR('Calendar'[Date]) & "-Q" & QUOTIENT( (MONTH('Calendar'[Date])-1), 3) + 1
Date	Year	Quarter
3/28/2012	2012	2012-Q1

3/30/2012	2012	2012-Q1
3/31/2012	2012	2012-Q1
4/1/2012	2012	2012-Q2
4/2/2012	2012	2012-Q2

- Month

		Month = <code>FORMAT('Calendar'[Date], "MMM yyyy")</code>
Date	Year	Quarter
1/1/2012	2012	2012-Q1
1/2/2012	2012	2012-Q1
1/3/2012	2012	2012-Q1

## Configuring Sort Columns

- Some columns do not sort in desired fashion by default
  - For example, April will sort before January, February and March
  - Column must be configured with sort column for desired sorting

MonthSort = `FORMAT('Calendar'[Date], "yyyy-MM")`

Date	Year	Quarter	Month	MonthSort
1/1/2012	2012	2012-Q1	Jan 2012	2012-01

## Sales Growth PM Measure - First Attempt

- Create a measure named Sales Growth PM

```
Sales Growth PM =
DIVIDE(
    SUM(Sales[SalesAmount]) -
    CALCULATE(
        SUM(Sales[SalesAmount]),
        PREVIOUSMONTH(Calendar[Date])
    ),
    CALCULATE(
        SUM(Sales[SalesAmount]),
        PREVIOUSMONTH(Calendar[Date])
    )
)
```

- Use measure in matrix evaluating month and quarter
  - Measure returns correct value for Month
  - Measure returns incorrect and erroneous value for Quarter

Year	Quarter	Month	Sales Revenue	Sales Growth PM
2015	2015-Q1	Jan 2015	\$512,822	-11.88 %
		Feb 2015	\$597,684	16.55 %
		Mar 2015	\$532,123	-10.97 %
	2015-Q2	Total	\$1,642,629	182.25 %
		Apr 2015	\$602,751	13.27 %
		May 2015	\$647,276	7.39 %
	2015-Q3	Jun 2015	\$608,448	-6.00 %
		Total	\$1,858,474	249.26 %
		Jul 2015	\$620,316	1.95 %
		Aug 2015	\$678,499	9.38 %

## Using the ISFILTERED Function

- ISFILTERED function used to determine when perform evaluation

```
Sales Growth PM = IF(
    ( ISFILTERED(Calendar[Month]) && ISFILTERED(Calendar[Date]) = FALSE() ),
    DIVIDE(
        SUM(Sales[SalesAmount]) -
        CALCULATE(
            SUM(Sales[SalesAmount]),
            PREVIOUSMONTH(Calendar[Date])
        ),
        CALCULATE(
            SUM(Sales[SalesAmount]),
            PREVIOUSMONTH(Calendar[Date])
        )
    ),
    BLANK()
)
```

- Expression returns Blank when evaluation context isn't appropriate

Year	Quarter	Month	Sales Revenue	Sales Growth PM
2015	2015-Q1	Jan 2015	\$512,822	-11.88 %
		Feb 2015	\$597,684	16.55 %
		Mar 2015	\$532,123	-10.97 %

	2015-Q3	Jun 2015	\$608,448	-6.00 %
		Total	\$1,858,474	
		Jul 2015	\$620,316	1.95 %
		Aug 2015	\$678,499	9.38 %

## Simulating KPIs with Power BI Desktop

- KPIs are not yet support
- But you can create something similar using measures

```
Sales Growth PM Eval =
IF( ISNUMBER([Sales Growth PM]),
    SWITCH(TRUE(),
        ([Sales Growth PM] >= 0.2), "EXCELLENT",
        ([Sales Growth PM] >= 0.1), "GOOD",
        ([Sales Growth PM] >= 0), "OK",
        ([Sales Growth PM] < 0), "BAD"
    )
)
```

```
Sales Growth PQ Eval =
IF( ISNUMBER([Sales Growth PQ]),
    SWITCH(TRUE(),
        ([Sales Growth PQ] >= 0.2), "EXCELLECT",
        ([Sales Growth PQ] >= 0.1), "GOOD",
        ([Sales Growth PQ] >= 0), "OK",
        ([Sales Growth PQ] < 0), "BAD"
    )
)
```
